

INTRODUCING MORE MOVEMENT MATTERS

HOW DOES IT WORK?

- A mobility specialist collaborates with our PT and the nursing staff on the patient's care plan and exercise routine
- The therapy team focuses their talents on highly skilled treatment interventions.
 - » Evidence-based benefits include reduced fall risk, improved muscle strength, and happier patients
- The mobility specialist focuses on restorative therapy, which helps patients maintain or exceed physical abilities and helps promote independence and well-being
- Streamlines workforce efficiency
- The cost-benefit of the program results in savings that we pass on to our clients

More Movement Matters, a new component of our evidence-based clinical model, helps alleviate the immobility and inactivity patients and residents experience after a hospital stay. Evidence proves that increased general activity and mobility improve clinical and functional outcomes in skilled nursing. With the addition of this program, we are setting the standard for the future of high-value rehabilitation.
